

NeTIX provides support for EDI in a versatile environment

EDI in a Cloud Environment

NeTIX for EDI provides a truly unified, on-demand B2B integration server built on a single platform environment. Connecting with trading partners is the soul of your business. How well you do it has a critical impact on your business. At NetEDI our B2B solutions take care of all your business and trading partner requirements so you can concentrate on seeking new partnerships, automate and increase business process efficiency and reduce the cost of doing business.

All of the necessary components your company needs, tools, technology, platform and access to NetEDI's expertise are all provided to your company. Our solutions are designed for fast and

flexible delivery. We administer the complexities of B2B integration and reduce your need to invest in and maintain databases, servers and your own hardware.

All of the necessary components your company needs, tools, technology, platform and access to NetEDI's expertise are all provided to your company, eliminating the need for company-owned hardware and software. Building your Business-to-Business relationships is no longer a constraint on time and resources, NetIX will change the way you use EDI.

Benefits

- EDI Software as a service No investment needed for hardware
- EDI Software as a service available at a fast turnaround
- Easy to use
- Integrate with almost any Back-office accounting software or ERP
- No Maintenance issues
- The details are abstracted, no need for Technical Knowledge

Ideal for companies that:

- Don't want to rely on IT personnel for keeping their EDI software and hardware up-to-date
- Are looking to integrate EDI with their internal ERP system
- Would like mobility in their EDI solution. You can access the service wherever you have an internet connection.
- Are looking for a simple interface that gives full control over all your EDI data and network traffic.

NeTIX's hosted EDI translation allows you to process your Orders, Invoices, Despatch Advices whilst providing seamless integration with your internal accounting software or ERP system.

NeTIX provides the benefit of processing your EDI data locally while maintaining the advantages of complete visibility and redundancy offered through the hosted EDI solution.

Various File formats can be handled by the powerful NeTIX translator. The versatile NeTIX adapters are able to handle virtually any structured file format including the native format of your ERP or back-office accounting system

Everything in One Place

The seamless collaboration between NetIX and the NEGrid VAN provides complete control and visibility of your EDI traffic. The NetIX solution provides you with a unique and comprehensive overview for the full end-to-end transaction flow.

Providing Business Intelligence, NetIX uses the cloud as a platform for monitoring the flow of your EDI traffic without having to go through additional systems to extract the information.

The NeTIX Cloud computing solution allows small to medium sized companies to utilize and leverage technologies that were traditionally inaccessible by helping to cut costs, add expertise and remove complexity. Avoid capital expenditure on new hardware, software and other peripheral services when you only pay for what you use.

By eliminating these operating costs while receiving strategic services through a pay as you go model, your company is cutting costs without sacrificing the quality of your service.

In addition, by utilising the internet and a browser, you can access the NeTIX application and all of your data anytime, any place. This offers great versatility and affords more flexible working patterns.
